

ERIKS Edge protector seal profile

The rubber clamping profiles from ERIKS are used as seals in a wide variety of applications. These products consist of an EPDM or PVC clamping profile and a flexible sponge rubber or solid rubber sealing element. They are easy to mount in your application: simply slide them onto the edge of a plate. When purchasing a seal profile, you need to know the plate thickness or the range that the product can accommodate. The sealing element of the edge protector profiles can be pushed in (almost) completely. If you want to get the best life out of your product, we advise only compressing the element by 25 to 30%. If the standard models do not meet your requirements, contact our customer service team and we will create a clamping profile that will do the job. Note that you will need to order hundreds, sometimes even thousands, of metres if you require a custom product of this type.
