

KUKKO Universal puller, two and triple arms type ..-10-SP

ALTECHIP GEFIX

Design: Made of special steel. Slim, even under full load of parallel remaining S-puller legs, can be shifted continuously on the traverse. Traverse with hexagonal profile for countering with a wrench. Spindle head with collar to prevent slipping of the key.

More uniform load distribution, thereby particularly secure hold.

Application: By inverting the puller legs, also suitable as external and recessed extractor. Ideal in tight spaces, for removing transmission gears, bearings, pinions and synchronous bodies in several cutting depths. Also suitable for pulling asymmetrical tools.

Automatic self-tensioning and centring of the puller legs. Optimised geometry of traverse and sliders for particularly easy movement of the puller legs. At the same time, ensures a firm grip when tightening the screws.
