

3M Scotch-Brite Radial Bristle TA Brush BB-ZB

Design: Scotch-Brite® Bristle brush type A (straight segments), yellow, made of individual plastic segments with integrated ceramic Cubitron. The segments are connected with a flange (25.4 mm inner diameter). The unique construction of Bristle products prevents brushes from clogging and ensures long service life and consistent performance. Due to the flexibility of the individual filaments, a constant finish is achieved, even on profiled surfaces.

Application: To clean heavily clogged filaments and for deburring and preparing surfaces. Ideal for use on the bench grinder, straight grinder or bendable shafts. Supplied incl. adapters for reducing the inner diameter.

Note: Observe safety recommendations.
