

VAG Pressure reducing valve Type: 21150 ductile cast iron flange

Control valve for cavitation-free control of pressure and flow without auxiliary power. Long service life thanks to the hardened and therefore wear-resistant seat. The seat is welded to prevent bacteria from settling between the casing and the seat. The sleeves with a screw thread (CORFIX) pressed into the casing prevent exposed spots and therefore corrosion in the connections of the control lines. The control lines and fittings are made of stainless steel.

Characteristics

Series: PICO®

Type: 21150

Connection: Flange

Maximum inlet pressure: 10 bar

Housing material: Ductile cast iron

Material quality: EN-JS1030

Material disc: 1.4301

Seat material: 1.4301

Membrane material: EPDM

Material spring bonnet: Plastic

Application

- Water, drinking water and other neutral media.

Technical Information

- Construction length in accordance with EN558.
- Leakage rate A in accordance with EN 12266-1.
- Regulator and filter made of stainless steel 1.4404, pipe control unit and screwed parts in A4 quality.
- Standard with exterior coating of epoxy in RAL 5005 and a layer thickness of 250µm.

Approval

- DVGW/KTW approval for drinking water.

Options

- Other materials, flanged connection and larger flow capacity.
- Pressure class PN25.
- Smaller and larger cylinders (SZ10, SZ20 and SZ60).
- Coating according to customer specifications.
- Available with EN 10204.31 certification.
