

SKF Sliding strip Sheet steel/POM composite Low-maintenance Series: PCMS

- POM composite strips are suitable for space-saving arrangements of all types. These strips can easily be fit to the application and counterface. They are referred to as prelubricated because their material is designed to operate with marginal lubrication.

Advantages of these strips include:

- maintenance-free operation
 - very good frictional properties
 - high load carrying capacity
 - high sliding velocity
- POM composite strips are suitable for applications where a sliding material with self lubricating properties is a prerequisite.
- Application area examples for these bushings are:
- agricultural equipment
 - construction machinery
 - material handling equipment
 - home appliances and consumer goods

Characteristics

Series: PCMS

Maintenance: Low-maintenance

Material outer sheath: Sheet steel

Tread material: POM composite

Manufacturer ID	Length mm	Width mm	Height mm	Article
