

TB DAVIES Safety cage

The Safety Cage features Little Giant's patent-pending Ground Cue® bottom-rung signal. The Ground Cue trains the operator to feel and hear an audible alert reminding him or her it is safe to step off the ladder. The Safety Cage is constructed of non-conductive, high-strength fiberglass-resin composite. The Safety Cage is mobile and lightweight compared to other enclosed platform options like scaffolds or powered lifts, so you can use it in areas like stages or interstitial levels where a mechanical lift or ordinary stepladder could never go. The Safety Cage allows operators to work hands-free in any direction in complete safety because, unlike platform stepladders, its "wrap-around" guardrail actually wraps around the operator completely in total compliance to tie-off rules. The Safety Cage helps protect operators from the most common causes of stepladder falls, including standing on the top cap and over-reaching. The Safety Cage stores in a compact footprint and is easy to store and transport. Time- and energy-saving Tip & Glide™ Wheels make it quick and easy to move from job to job
