

RÖHM Revolving center with extended track and point angle 60° type 3306

Design: Body and tip drop forged, hardened and ground. Moving tip is regrindable for several times and shank-mounted, with tip angle 60°. The precision bearing is protected from dirt and coolant by the special lip seal. The shank is ground, with hole for easy dismantling. The permissible load is reduced by the extended moving tip. With short projection length and low-vibration running.

Application: For precision turning and roughing, can be universally used on all types of lathes. Particularly suitable for copy turning. The extended tip enables unobstructed movement of the sliding rests.
