

ERIKS Rectangular/square profiles

The rectangular/square rubber profiles from ERIKS are used in a wide range of applications. They act as a sealing profile or a profile for absorbing impacts. Some are self-adhesive.

If you want to order a rubber profile from us, you can choose from several options. The standard products are often made of EPDM or CR and black or white in colour. In addition, you can choose between sponge rubber [foamed] and solid rubber. Sponge rubber is mainly suitable for sealing against lightweight media, such as dust and air. Solid rubber is what you use for large applications where the forces are greater; for example, a heavy hatch. Details of the most popular materials are provided below.

Technical Information

- Materials

EPDM: resistant to UV radiation and ageing

TPE: modern and environmentally friendly version of EPDM

CR: good mechanical properties and resistant to many chemicals and oils

VMQ: resistant to large temperature fluctuations

PVC: inert, flexible and stable plastic

If the standard models do not meet your requirements, contact us. At your request, we can produce a rectangular or square rubber profile that does the job.
