

SKF Single row spherical roller bearing Cylindrical bore

Single row spherical roller bearings are self-aligning roller bearings. They comprise solid outer rings with a concave raceway, solid inner rings with two ribs and a cylindrical or tapered bore and barrel rollers with cages. The bearings cannot be dismantled.

Single row spherical roller bearings are particularly suitable where high radial shock type loads occur and misalignments must be compensated. Their axial load carrying capacity is small.

Characteristics

Series: 202

Bore: Cylindrical bore

With sealing: No
